

Thanks for attending our Innovative Advanced Solutions Session!

MANCHESTER, IA – Thank you for taking time to attend our first Innovative Advanced Solutions session on Tuesday, June 11th at the Manchester Answer Plot! Although there was a chance for some rain, we were fortunate that the good weather stayed with us when we completed the first of three of our sessions at our plot 2 miles south of Manchester on Highway 13.

During this session, our growers were given hands-on training on what to look for in this year's unique crop. They also received answers to their burning questions regarding when to switch seed variety, how much nitrogen they have really lost, how do they adjust their side-dressing nitrogen prescription and what kind of insects and diseases should they be looking for this year. This year's crop will most certainly present us with some challenges with the persistent rains, late planting dates and the short time frame to get the emerging crop sprayed. However, as we learned at our first session, it is important to continue to work closely with your agronomy advisor to ensure that you are doing everything possible to make this crop a successful one!

Keep an eye out for more information about our 2nd Innovative Advanced Solutions Session that will take place on July 23rd at 5:00 PM.
